

Natural Stone Top Care

Removal of Beverage Spills or Rings

Beverage Spills

Beverage Rings

Directions:

Dilute 2 ounces of white vinegar in a quart of water. Apply the solution and scrub entire top with a scrub sponge to remove water rings/beverage spills and existing sealer.

Remove the white vinegar/water solution with clean towels and follow with a clean water rinse and towel dry.

Inspect the top and make sure the water rings/beverage spills have been removed.

Apply a natural stone sealer/color enhancer for maximum protection against the outdoor elements.

Note: A water test of dropping beads of water on surface is the key to knowing when the natural stone top needs sealing. If the stone absorbs water, then sealing the top with an impregnating sealer is recommended. Natural stone should be cleaned and maintained with products recommended for natural stone.
